

PVC Yellow Safety Warning Strip
February 10, 2014

To: Versico Approved Contractors

Versico is pleased to announce the addition of a PVC Yellow Safety Warning Strip to its VersiFlex™ PVC product line. Unlike non-reinforced warning strips, this product incorporates the same polyester reinforcement used in VersiFlex PVC and VersiFlex-E KEE HP membranes, which helps to prevent wrinkling or race-tracking during the welding process. The 35-mil-thick (0.89 mm) PVC Yellow Safety Warning Strip is used to caution maintenance personnel regarding falling and/or tripping hazards around roof edges, deep drain sumps, and skylights.

The product's yellow color is achieved by using a UV-resistant, permanent, colorfast, printed flood coat that will protect the product from fading over time.

Product Description	Packaging	Part Number
PVC Yellow Safety Warning Strip	1 roll (12" x 150') per carton	322980

Features and Benefits:

- Polyester reinforced: lays flat and helps to prevent race-tracking
- Extended: 12" x 150' rolls help to reduce end welds and waste
- Permanent and colorfast coating: provides resistance to fading and retains a bright yellow color
- Heat weldable: no adhesives required for installation.

If you have any questions or for more information, please contact your local Versico representative or distributor.

Best Regards,

John C. Greko
