

VersiFleece FRS PVC Membrane May 6, 2014

Versico Roofing Systems is proud to announce the addition of VersiFleece FRS PVC membrane to its VersiFleece PVC product line. VersiFleece FRS PVC features the superior weatherability, flexibility and toughness of Versico's PVC, a high-strength fiberglass reinforcing scrim for added dimensional stability, and a polyester fleece backing for increased puncture- and tear-resistance. The fleece backing also provides a built-in separation layer, protecting the membrane against rough concrete decks or existing asphaltic-based roofing systems.

VersiFleece FRS PVC membrane is available in white ten-foot-wide sheets and in total thicknesses of 115 or 135 mils.

Features and Benefits:

- Mechanical and molecular bond between the PVC membrane and fleece backing offers excellent wind uplift performance
- Fiberglass reinforcement improves dimensional stability
- Polyester fleece adds toughness, durability and enhanced puncture resistance

PVC is one of the most easily weldable roofing materials. It provides superior chemical resistance to acids, bases, restaurant oils, fats, greases and acid rain.

If you have any questions or for more information, please contact your local independent sales representative or distributor.

Best Regards,

John C. Greko
