VersiTrim™ Heat-Weldable Drip Edge
July 11, 2011

To: Versico Independent Sales Representatives and Distributors

Versico is pleased to introduce its new VersiTrim Heat-Weldable Drip Edge, a prefabricated drip edge that eliminates the need for shop-bending or stripping in roof edges with pressure-sensitive flashing. VersiTrim Heat Weldable Drip Edge is an enhanced version of Versico's standard Drip Edge that incorporates TPO- or PVC-coated metal.

The VersiTrim Heat-Weldable Drip Edge can be quickly and easily set up: simply install the metal cleat, install the TPO or PVC-coated metal face piece, and weld the field sheet to the edge.

VersiTrim Heat-Weldable Drip Edge features a concealed splice plate for a smooth, unbroken appearance. Pre-punched holes and supplied fasteners allow for proper attachment and fast installation, while the continuous 24-gauge galvanized steel clip and supplied ring shank nails create long-term holding power. It is available in standard sizes, which include a 2.5", 4", 6.5" and 8" face in 10-foot lengths.

Product Code	Color/Face Size	L.F. List Price
319159	TPO White/2.5" Drip Edge	$5.06
319160	TPO White/4" Drip Edge	$5.80
