

VersiTrim One Edge
July 11, 2011

To: Versico Independent Sales Representatives and Distributors

Versico is pleased to announce the introduction of VersiTrim One Edge, a high-quality and economical edge system for applications where resistance to extreme winds is not desired.

Three options are available – VersiTrim One Edge Edging, VersiTrim One Edge Fascia and VersiTrim One Edge Coping. VersiTrim One Edge is available for adhered, mechanically attached and ballasted systems.

The VersiTrim One Edge systems are designed and priced to be competitive for contractors who purchase metal edge from local fabricators. VersiTrim One Edge is designed for easy installation since it does not require stripping in with cover strip.

All edges are compliant with the International Building Code (IBC) and tested to ANSI/SPRI ES-1 standards. VersiTrim One Edge products offer up to a 20-year warranty and 80-mph wind speed coverage. VersiTrim One Edge allows the contractor to maintain a competitive advantage by including the metal edging as part of Versico's Total System Warranties.

The following 3" products are available in 24 Ga Pre-Finished Kynar Steel, .040" Mill Finish Aluminum, .040" Pre-Finished Kynar Aluminum, .040" Clear Coil Anodized Aluminum or .040" Color Coil Anodized Aluminum:

12' lengths (LF), Miter, Overflow Scupper, Spillout Scupper, Downspout Scupper

If you have questions regarding VersiTrim One Edge, please contact your regional manager.

Sincerely,

David French
