

SunWeld™ Prismatic Skylight
July 1, 2011

To: Versico Independent Sales Representatives and Distributors:

Versico's SunWeld™ conventional skylight product line now features a prismatic skylight with tri-arch dome assembly. This skylight utilizes two layers of impact-modified prismatic acrylic thermoformed into a unique vaulted shape. Versico's SunWeld prismatic skylight outperforms the competition, and is ideal for situations where our unique and proprietary DryLight® skylight is excluded from consideration.

Two significant differences between the SunWeld prismatic and similar competitive units are dome shape and the type of thermal break used within aluminum retainer frames. Because flat shapes are used for lab testing when measuring characteristics like haze and luminous transmittance of skylights, the complex shape of competitors' domes present some problems that do not appear in the test reports. The SunWeld prismatic skylight utilizes a polyurethane bridge for its thermal break, which results in a true, thermally broken frame.

The adjacent photo is the SunWeld Prismatic unit, with its tri-arch design. It provides structural dome integrity and allows greater light transmission during the critical early morning and late afternoon time periods, due to its gentler profile and absence of ribs. When using the same testing procedure for measuring luminous transmittance, the SunWeld Prismatic unit resulted in 16% brighter light than the published results of competitive units.

The SunWeld Prismatic is offered in three standard sizes (4' x 4', 4' x 8', and 5' x 6') with custom sizes available upon request. The dimensions shown represent the inside curb dimensions or roof opening dimensions of the SunWeld prismatic unit. As such, these units are actually three inches larger than the standard Drylights. The InsulCurb™ SIP curb option is not currently available with the SunWeld prismatic unit. Pricing is provided via the quote process and varies according to quantity. Freight is added on to all orders.

Please ensure that your authorized contractors are aware of these additions to Versico's skylight product lineup. If you have any questions regarding this marketing update, please contact me at 717-245-7314 or laremorek@carlisleccm.com.

Sincerely,

Ken Laremore
Skylight Product Manager
