

VersiTrim Heat-Weldable Drip Edge

Versico's full line of prefabricated roof edge products provide an easy-to-install, economical, and long-lasting solution for any roofing installation. All of Versico's roof edge products have been tested and proven to meet the ANSI/SPRI ES-1 roof edge standards set forth in the 2003 and 2006 International Building Code (IBC). This comprehensive set of standards, which has already been adopted by 50 states as well as Washington D.C., requires roof edge products to meet or exceed previously determined wind-resistance ratings.

VersiTrim Heat-Weldable Drip Edge is a prefabricated drip edge that eliminates the need for shop-bending or stripping in roof edges with pressure-sensitive flashing. VersiTrim Heat-Weldable Drip Edge features a concealed splice plate for a smooth, unbroken appearance. Pre-punched holes and supplied fasteners allow for proper attachment and fast installation, while the continuous 24-gauge galvanized steel clip and supplied ring shank nails create long-term holding power. It is available in four standard sizes, all in 10-foot lengths.
