

**VersiGard® White EPDM Product Line Additions
December 18, 2018**

To: Versico Roofing Systems' Authorized Contractors

Versico Roofing Systems is excited to add two new accessory options to the VersiGard White EPDM product lineup.

8" VersiGard White EPDM Pourable Sealer Pockets – These 8" pockets are ideal for sealing irregular or hard-to-flash penetrations on VersiGard White EPDM and VersiWeld® TPO roofing systems. In the past, contractors were restricted to a 6"-diameter pocket; the new 8" option will allow them to tackle larger penetrations with ease.

6" VersiGard White EPDM Peel & Stick T-Joint Covers – These 6" x 6" factory-cut T-Joint Covers consist of a top layer of VersiGard White EPDM Peel & Stick Uncured Flashing laminated to a bottom layer of Quick-Applied Tape. This product is ideal for sealing field splice intersections, horizontal-to-vertical transitions of field splices, and perimeter edge metal joints on VersiGard White EPDM and VersiWeld TPO systems. Using pre-cut T-Joint Covers results in increased productivity and a more uniform appearance across the roof.

Description	Product Code	Packaging	Weight	Stocking Location(s)	Shelf Life
