

Low-VOC Primer Update February 27, 2014

To: Versico Authorized Contractors

Versico's Low-VOC EPDM Primer is undergoing a name change to Low-VOC Primer as we are extending its use to include our VersiWeld® TPO roofing systems.

In testing completed by our R&D department it was determined that we were getting improved results with the Low-VOC EPDM Primer used in conjunction with our VersiWeld TPO Cover and RUSS Strip.

We will be discontinuing our Low-VOC TPO Primer. When inventories of Low-VOC TPO Primer (Product Code 317064) are depleted please place your orders for Low-VOC Primer using the product code listed below.

The product code for Versico's Low-VOC Primer is the code previously used for its Low-VOC EPDM Primer. No change in ordering is required for EPDM installations.

Product Code	Description	Packaging	Weight
316522	Low-VOC Primer	6 – 1-gallon cans	60 lbs.

Versico's Quick-Applied Seam Tape and flashings should be set into the Low-VOC Primer soon after the primer has flashed-off to achieve the best green strength and avoid the potential for contamination.

If you have any questions, please contact your local Versico sales representative or distributor.

Sincerely,

David French
