

**SecurShield HD EPS Composite**  
**February 29, 2012**

To: Versico Independent Sales Representatives and Distributors

Versico is pleased to announce the introduction of SecurShield HD EPS Composite to its growing line of energy-efficient commercial insulation products. SecurShield HD EPS Composite is the first composite insulation panel of its type. By combining lightweight and resilient expanded polystyrene (EPS) with Versico's SecurShield HD ½" high-density cover board (100 psi polyiso), SecurShield HD EPS Composite is the ideal solution for any Versico roof system, both new construction and re-roof applications, where high thermal efficiency and maximum durability are required. InsulFoam HD Composite provides savings in labor and material on projects that would typically require adhesive attachment. Fewer layers of adhesive and less handling translate to less labor and provide higher profits on roof installations.

SecurShield HD EPS Composite provides the following outstanding benefits:

- Cost effective combination of EPS and Polyiso
- Labor savings – less material handled
- Improved resistance to high winds
- High compressive strength resists damage from foot traffic
- The EPS foam core is available in compressive strengths from 10-60 psi and densities from 1.0-3.0 pcf
- Achieves FM's SH-1 severe hail rating
- Stable R-Value

Incorporating the polyiso ½" HD insulating cover board provides improved energy efficiency over alternative cover boards is easier to cut and is available in thicknesses from 1.5" to 7", achieving R-values from 6.5 to 30.5 in a single layer application.

Should you have any questions regarding the specification, uses or application of this revolutionary product, please contact your Versico Regional Manager

Sincerely,

*Edward R. Krusec*
