

**VersiWeld® QA TPO**  
**April 20, 2011**

**To: Versico Independent Sales Representatives and Distributors**

Restrictions on VOCs found in traditional solvent-based bonding adhesives continue to expand across the country, and the cost of labor to install traditional roofing systems is growing. Therefore, it is becoming exceedingly important to deliver fully adhered alternatives that both meet new regulations and provide labor savings. With these factors in mind, Versico is pleased to announce the introduction of VersiWeld QA TPO.

Versico's QA TPO fuses a 100%-solids hot-melt adhesive to the bottom ply of Versico's TPO sheet and therefore provides the benefits of reduced installation labor and the elimination of solvent.

Versico has spent years perfecting the proper adhesive formulation to combine with its TPO sheet. The TPO membrane used in QA TPO is also engineered for maximum thermal stability, and contains the same industry-leading weathering package and excellent long-term performance that is inherent to every Versico TPO product.

Versico's QA TPO will be offered in the following sizes:

309942	60-mil 10' X 100' QA TPO	0.441 lbs/sqft
309941	60-mil 10' X 50' QA TPO	0.441 lbs/sqft

QA TPO will be stocked in Carlisle, PA. Please contact your Versico Regional Manager or me if you have any questions regarding this product.

Sincerely,

David French  
Marketing Manager
